MTP1 - Power Pole

MTPP1 - Power Post

Power Pole

The double sided Marco power pole has the benefit of a strong aluminium profile designed to retain its rigidity in all installation situations. The length of the power pole can easily be modified on site and a height-adjusting locking mechanism is supplied. The pole benefits from 35mm deep accessory boxes for quick and easy installation of accessories.

A 1 metre aluminium power pole extension is available, and Marco can supply power poles up to 5 metres in length, normally from stock.

Each Marco power pole is supplied with six accessory boxes, ceiling shroud, floor boot, accessory spacers to help speed installation, and six metres of uPVC divider.

Power Post

The double sided Marco power post is used in much the same way as the power pole, but transfers wiring up from the floor, rather than down from the ceiling.

It is able to conceal wiring effectively and to conveniently position sockets, which is of particular benefit in offices and other application areas.

Marco power posts have a metal plate on the underside which is fixed securely to the floor, and a strong steel rod that extends from the plate through to the top of the post to give the product added strength. Power posts can be fabricated to specific sizes if necessary. Should you require any further information then please contact our sales office.

The power post is capped with a pyramidal top, and is supplied with a floor boot, six accessory boxes, uPVC divider and accessory spacers. The accessory spacers, which are fitted between the socket boxes, help to reduce installation times.

Code No	Description	Pack Size
